

ABSTRACT OF THE DISCLOSURE

The online corporate business planning and financial report forecast system and method of the invention are implemented in a network transmission environment. By building a professional online consulting website and allowing real-time interactions with
5 users through the network, the system lets user enter financial data, prospects, and goals of the corporation for the next few years according to questions on the website to obtain online real-time corporate business plans and forecast financial reports. The invention further includes a business planning system server and a business planning system database so that the plans and reports thus obtained can be compared with other companies within the same
10 industry. From the comparison, corporate financial distributions can be modified and optimized. The invention also ensures efficiency and privacy in obtaining corporate business plans and forecast financial reports.
